                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1, Application US/09280116A

Sequence 1, Application US/09280116A

Patent No. 6313427

GENERAL INFORMATION:

APPLICANT: Robison, Keith E.

TITLE OF INVENTION: Nucleic Acid Molecules Encoding Human Protease Homologs
FILE REFERENCE: 5800-24, 035800/176965

CURRENT APPLICATION NUMBER: US/09/280,116A

CURRENT FILING DATE: 1999-03-26

NUMBER OF SEQ ID NOS: 268

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 1

LENGTH: 1504
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 5, Application US/08044618
Patent No. 5449605
GENERAL INFORMATION:
APPLICANT: SMULSON, MARK
TITLE OF INVENTION: CANCER BY THE USED OF RESTRICTION TO
TITLE OF INVENTION: POLYMORPHISM OF THE GENE FOR THE HUMAN POLY (ADP-RIBOSE):
TITLE OF INVENTION: POLYMERASE
TITLE OF INVENTION: POLYMERASE
TITLE OF INVENTION: POLYMERASE
TITLE OF STREET OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Sterne, Kessler, Goldstein & Fox
APPLICAMT: Feder, John N.
APPLICAMT: Kronmal Gregory S.
APPLICAMT: Lauer, Peter M.
APPLICAMT: Lauer, Peter M.
APPLICAMT: Lauer, Peter M.
APPLICAMT: Thomas, Winston
APPLICAMT: Wolff, Roger K.
TITLE OF INVENTION: Requences and Antibodies Thereto
APPLICAMT: Wolff, Roger K.

```
The present sequence encodes one of 32 novel human secreted polypeptides.

The nucleic acid molecules and polypeptides they encode may be used in the nucleic acid molecules and treatment of diseases such as the prevention, diagnosis and treatment of diseases such as an immuno-deficiency virus (HIV) infections), hyperproliferative disorders (e.g. cancers and Gaucher's disease), cardiovascular diseases of Schmitter syndrome, Chapa's cardiomyopathy and coronary (e.g. Schmitter syndrome, Chapa's cardiomyopathy and coronary arteriosclerosis), angiogenic disorders (e.g. corneal graft neovascularisation and diabetic retinopathy), neurological disorders (e.g. Huntington's chorea, Alzheimer's diseases and parkinson's disease), infectious diseases and/or for promoting wound healing, regeneration and/or chemotaxis. The nucleic acid molecules may be used to produce the secreted polypeptides. They may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples. The polypeptides may be used as antigens in the body control of antibodies and in assays to identify modulators of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rat sequence differentially expressed in response to a hepatotoxin #508

                                                                                                                                                                                                                                                                                                                                                                                                                                                      AMEB1787 to AAFB1817 encode the human secreted proteins given in AAB74733 to AAB74772. Human secreted proteins can have activities based on the tissues and cells they are expressed in. Example of activities include: CC immunomodulatory; antisclerotic; dermatological; immunosuppressive; antinfilammatory; antisclerotic; dermatological; immunosuppressive; cc antinfilammatory; anti-Hry; immunostimulant; cytostatic; cardiant; cardiant; antiablablames; antiparkinsonian; antimicrobial; and convulsant; antiablablames; antiparkinsonian; antimicrobial; and vaccine. Human secreted protein scan be used in gene therapy and cytostatic with inappropriate polypeptide expression; for example, NAM1 and proteins can be used in the prevention, diagnosis and treatment of diseases and PEP1 may be used to treat disorders associated with decreased conversion by rectifying mutations or deletions in a patients genome conversion by rectifying mutations or deletions in a patients genome conversion by rectifying mutations or deletions in a patients genome conversion by prevented, diagnosed and/or treated include immune disorders, and prepared in disorders, and disorders, conversion of the promoting wound healing, regeneration and /or chemotaxis. AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) anto acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and proteins and polynucleotides may be used to treat disorders associated with decreased example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome comparable of the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) cupplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting content (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) proteins and prevent manuely polynucleotides may be used to prevent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human, cytokine, cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukaemia, inflammation and immune disorders —

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy, The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, memantopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity information activity and may be useful in the diagnosis and/or treatment of cancer, leukaemla, nervous system disorders, arthritis and
                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; secreted protein; gene therapy; protein therapy; cancer; weight; tumour; chromosome mapping; forensic; haematological disease; allergy; inflammation; cell proliferation; viral infection; wound healing; modulation; appetite; behaviour; food additive; preservative; ss.

The invention relates to nucleic acid sequences (AAX22211 to AAX22283) encoding human secreted proteins (AAY01831 to AAY01454). The secreted proteins (AAY01831 to AAY01454). The secreted colding human secreted proteins (AAY01831 to AAY01454). The secreted proteins are deposited with the ATCC under deposit number ATCC 209188, 209139, 209139 or 209114. Host cells containing vectors comprising the nucleic acid sequences are used for the recombinant expression of useful for preventing, treating or ameliorating medical conditions ergon by protein or gene therapy. Pathological conditions can be also diagnosed by determining the amount of the new polypeptides in a sample or by the sequences, or its fragments, are useful for chromosome identification conditions and mapping; as antisanse and triplex-forming therapeutics; in gene weight markers; to identify related sequences or specific acid weight markers; to identify related sequences or specific mRNA; in the preparation of oligomers and to raise anti-DNA antibodies. Antibodies are therapeutically to inhibit or activate particular polypeptides of disorders may be treated with the polynuclectide and conditions of disorders may be treated with the polynuclectide and allowy, inflammation, cancer or other forms of cell proliferation, viral conditate differentiation of embryonic stem cells, to modulate weight, concert or other forms of cell in wound healing, appetite, behaviour etc. and as food additive or preservative. The presents a gene encoding a human secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful ingene therapy. A composition containing a polypeptide or polynuclectide or polynuclectide or the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as lacalised neuropathies and central nervous system diseases, and the atlatifies and shy-brager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to 2175 novel human ovarian antigens (ABP41054-CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also cnompasses polypeptides 90% identical and polynucleotides 95% identical corporations and host cells comprising human ovarian antigen to the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides and polypeptides in diagnosing, creating, prognosing or preventing various ovary and/or breast cancer, and disorders. Such conditions include ovarian cancer and breast cancer, and clasorders (e.g., infertility, disorders of pregnancy, anovulation, disorders, infertility, disorders of pregnancy, anovulation, disorders, infertility, disorders of pregnancy, anovulation, collocations, infilammatory conditions (e.g., mastitis, oophoritis and varianties), immune disorders (e.g., congenital and acquired clasorders, autoimmune ophoritis, systemic lupus erythematosus), immunedificiencies, autoimmune ophoritis, systemic lupus erythematosus, immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus, collocatiates disorders, neurological disorders, gastrointestinal disorders and urinary system disorders, ovarian antigen polypeptides and complementation of individuals and in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may he used as food additives or to prepare antibodies collentification of individuals and in forensic analysis, and the individuals and in disease diagnosis, drug targeting and phenotyping. The present securing and phenotyping of the function of function of the function of function of functions of the function of functions o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases

                                NAME OF STREET O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and may activity, and may and elasticity in the contraction of 
                                                                                                                                                Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ma Y;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAW80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Lateral sclerosis, and shorager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and ch. S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute mysloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

```
The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA repair; cytosine methylation; PMS2L1; PMS2L12; PMS2L2; PMS2L3; PMS2, L4; PMS2L5; PMS2L5; MGMT; MSH2; NUDT1; TDG; INPPL1; RFC4; DDIT1L; FANCB; XRCC8; ataxia telangiectasia; aging; Bloom's syndrome; Cockayne syndrome; Nijmegen breakage syndrome; Werner syndrome; immunodeficiency; trichthiodystrophy; Fanconi's anaemia; solid tumour;

The present invention relates to oligonucleotides encoding polymorphic variants of proteins related to amylases, amyloid proteins, angiopoletin, apoptosis related proteins, cadherin, cytlin, polymerses, oncogenes, histones, kinases, colony stimulating factors, complement related proteins, cytochromes, kinesins, cytokines, interferons, interleukins, complement related protein coupled receptors and thioseterases. The present sequence is one such oligonucleotides and the peptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of the proteins listed above. Disorders that may be prevented, diagnosed and/or treated include multifactorial diseases with a genetic component, such as autolumune diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus and Grave's diseases), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, leukaemia), diseases of the nervous system and an infection of pathogenic
                                                                                                                                                                                                                                                                                                Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, oncogenes and histones, useful for diagnosing and treating, e.g. cancer, autoimmune diseases and infections -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; colon cancer; colon cancer antigen; diagnosis; detection; colorectal carcinoma; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to nucleic acids containing a sequence of at least 18 nucleotides of chemically treated DNA of genes associated with DNA repair, and their complements. The invention also relates to nucleic acids comprising at least 18 base pairs of the chemically pretreated DNA of genes associated with DNA repair selected from PMS2L1, PMS2L12, PMS2L3, PMS2L3, PMS2L5, PMS2L5, MGMT, MSH2, NUDT1, TDG, INPPL1, RFG4, DDIT1L, FANCB, or XRCG8, Nucleic acids of the invention and related oligomers, are useful for diagnosis of diseases associated with gene repair, specifically ataxia telanglectasia, aging, Bloom's syndrome, Cockayne syndrome, Nijmegen breakage syndrome or Werner syndrome, Immunodeficiency, trichthiodystrophy, Fanconi's anaemia, solid tumours and cancer, particularly by determining status of cytosine methylation and related and/or by detecting single-nucleotide polymorphisms. Determination of individual methylation patterns may allow development of individualised theraples. The sequences given in records ABL92192-ABL92335 represent consisted with DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers -

Claim 1; Page 2294; 9803pp; English

cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing hadditionally. N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and AAB77789 represent sequences used in the exemplification of the M.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922. AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon

                                                                                                                                                                                                  / tau_unsus_nair_wirk bild.
//note="Organ: green seedlings; Vector: pAD-GAL4; Site_1:
ECORI; Site_2: Xhoi; ds-CDNA molecules were generated as
ECORI; Site_2: Xhoi; ds-CDNA molecules were generated as
ECORI; Site_2: Xhoi; ds-CDNA was prepared from oligo-dr
selected mRNA by priming with an Xhoi oligo-dr primer. The
resulting DNA:RNA hybrid was treated with RNase H and used
as a template for DNA POII-catalyzed second strand
synthesis. After the addition of ECORI adaptors, the
ds-CDNAs were digested with Xhoi and size-selected. The
resulting molecules were directionally cloned into the
ECORI and Xhoi sites of the HybrizAP lambda vector
(Stratagene) and excised as pAD-GAL4 phagemids."
